

## Reference profiles

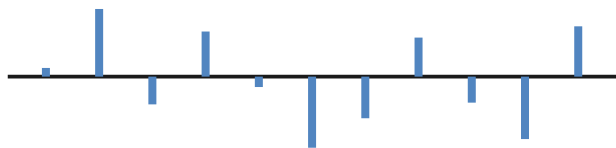

### gene-mean $\delta$

direction only,  $\alpha = 0$

### variant-specific $\delta$

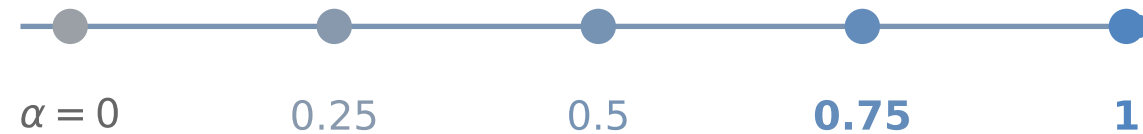

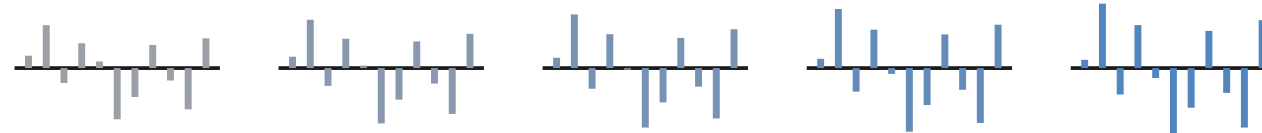

$\alpha = 1$

## Synthetic predictor construction

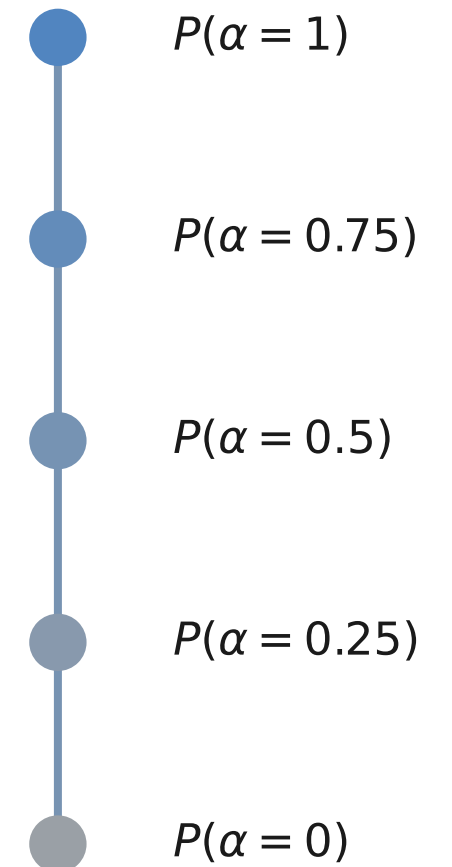

$$\hat{\delta}(\alpha) = (1 - \alpha) \cdot \text{gene-mean} + \alpha \cdot \text{variant}$$

### synthetic predictor family

## Known quality order

### true quality

true order known  
by construction

Interpolation defines a predictor family with known graded quality.
