

TP53 DNA-binding domain

R175H
Arg → His

Physicochemical change

ΔH hydrophobicity

ΔV side-chain volume

ΔQ charge

Structural / functional context

f fold-core location

s functional-switch residue

h hotspot / pathogenic prior

$$\theta_{R175H} = [\Delta H, \Delta V, \Delta Q, f, s, h]$$

6-dimensional protein-level representation

shared feature space
