

IDENTIFICATION PASS (a) → SCORE THE HELD-OUT PREDICTION

Direction recovery

SUPPORTING AXIS

Pearson- δ · δ -cosine

Is the shared response
direction recovered?

Allele discrimination

PRIMARY MODEL SCORE

PDS

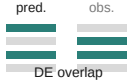

tie-aware percentile rank
of its own observed allele

chance = 0.50 · higher is better

Does $\hat{\delta}_v$ rank its own observed allele
above sibling alleles?

DE-program fidelity

SUPPORTING AXIS

DE-LFC rank
direction agreement

Do changed-gene
programs agree?

Measurement identification validates the benchmark; PDS evaluates the model within it.
